Composting at home:

Select a dry shady spot near a water source for your compost bin. Add brown and green materials as they are collected and moisten them, mix in grass clippings, and green waste often, then bury fruit and vegetable waste under 10 inches of compost material. Optional: You can cover the top of the compost with a tarp to keep it moist. When the material at the bottom is dark and rich in color, your compost is ready to use. This could take anywhere between two months to two years.

The Principles of the five R’s:

- **Refuse** to buy it if you do not need it. Do not take the “freebie” if you are not going to use it.
- **Reduce** what you buy or purchase in quantity to limit excess packaging
- **Reuse** instead of purchasing single use items, such as water bottles and metal straws.
- **Repurpose** something old making a new item.
- **Recycle** bottles, cans, cardboard, and newspapers.
